

# **Motorised Rotary Stages Ø75**

high precision, medium duty

L3552

# Material

Aluminium alloy body (light, stiff and stable), black anodised. Weight 1,6 Kq.

# **Technical Notes**

The design utilises a thrust bearing system for the table movement. This offers excellent stability at low cost, but as a result, is not really suitable for use in a vertical application. For vertical applications see L3254 and L3258 - L3262.

Easy plug and play system. Controllable from PC or PLC when used in conjunction with a motion controller. Controllers come with their own software but you can also use your own pre-existing software with them such as Labview etc.

Integrated stepper motor has a motion controller built into it.

The stages are offered with different gear ratio options. A proprietary preload system ensures zero backlash in the gear train. The travel is 360° continuous.

Easy to use plug and play system when used with a motion controller. Can be used in conjunction with motorised linear stages for multi axis applications.

# Ting

Requires external home switch (if required).

Motor options:

**Stepper** - Nema 17, high torque, brushless. 0.95 Amp/phase, 5.0 Ohm/phase, 3.1 mH/phase, 1.8°/step. Optionally with home

switch and/or 1000 line rotary encoder. **Intelligent stepper** - Nema 17 with a fully programmable motion controller inbuilt (i.e. no need for an external motion controller). Two +5 to +24VDC I/O lines. One 10 bit analogue input selectable 0 to +10VDC, 0 to +5VDC. Optionally with home switch and/or 512 line rotary encoder. RS422/485 communications. Input voltage +24VDC. Drawings show stepper motor configuration. See special pages for further motor options.

<sup>\*</sup>Dependent on stage selected

# **Factors affecting stage performance**

# Run-out

The displacement of a measure sensor placed on the surface of the rotary table.

# **Applied loads**

These cause small deformations in the stage bearings and are dependent on the stiffness of the stage, the bearings and the stability and flatness of the mounting surface.

# **Hysteresis errors**

The difference between the control and instructed position.

# **Backlash errors**

Errors caused by the reversal of the direction of travel affected by clearance in the drive chain.

# **Encoder errors**

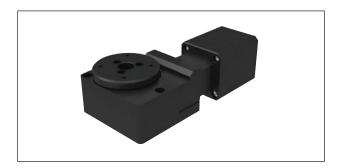

Imperfections in the operations of the encoder (if present).
