

Anti-vibration Cones male

ti-Vibration mponents

Material

Rubber on silver zinc plated steel (rubber hardness - 65 Shore A).

Tips

These anti-vibration cones or bumpers are

used to reduce vibration and shock. Their conical shape ensures that, when used in a row, the buffers spread loads over a number of cones - reducing the chances of possible overloading.

Important Notes

The working load should not exceed 65% of the maximum load.

General Anti-vibration Cylinders

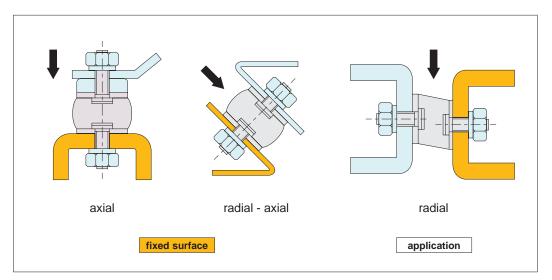

installation methods for cylinders

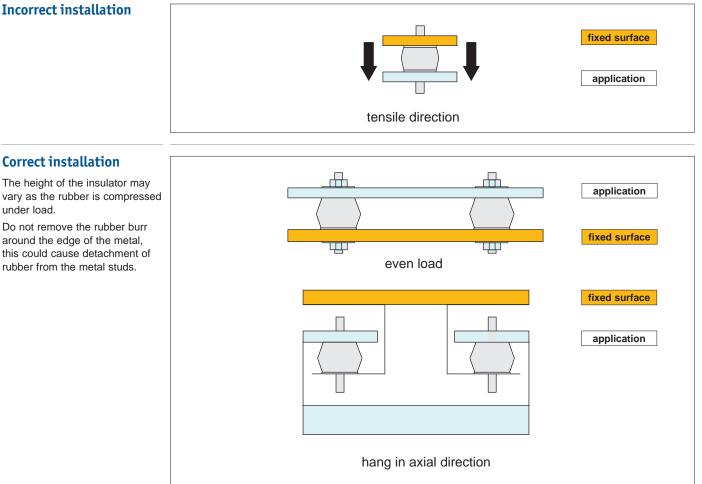

ov-W61040-AP2004-T-W61242-AP2025-T-Inh- Updated -28-10-2022

Acceptable loads

Cylindrical mounts are never to be used in tension, they should only be used in axial or radial. Radial loads are however considerably less than axial loads. Parts with small diameters (d₁) and relatively long lengths (h) cannot accept radial loads.

Installation

AN ESSENTRA COMPANY
